

# Test Case

## Ingredients:

- Successfully added a new ingredient; it functions properly.
- Updated the quantities of ingredients without issues.
- Confirmed proper error prompts when attempting to add a quantity of a non-existent ingredient.
- Deleted ingredients successfully.

## Side Dishes:

- Added new dishes without complications.
- Updated dish quantities as intended.
- Removed dishes without any problems.
- Successfully retrieved dish data by name.
- All side dish tasks performed seamlessly.

## Recipes:

- Retrieved the list of recipes accurately.
- Located specific recipes successfully.
- Added new recipes without any issues.
- Updated recipe ingredients as required.
- Removed recipes without complications.

## Pizza:

- Generated an accurate list of pizzas.
- Successfully found pizzas by name.
- Added new pizzas without any problems.
- Removed pizzas as needed.
- Obtained a list of pizzas by category.

## Orders:

- Verify the correct display of all existing pizzas, including names, descriptions, and prices.
- Check for the presence of pizza categories within the 'add pizza' flow (e.g., vegetarian, meat lovers, specialty).
- Test the ordering process by adding and removing items.
- Test the addition of custom pizzas.
- Attempt to add multiple side dishes within the same order.
- Validate error prompts for adding dishes not present in the database, ensuring proper notification like 'this side dish is not in the database.'
